Complex matrices
Hermitian and Unitary Matrices

# **Complex numbers**

#### **Forms**

Rectangular form: z = x + iy,

Re(z) = x - real part, Im(z) = y - imaginary part

Example: z = 5 + i6

**Polar form:**  $z = r \cos(\phi) + i r \sin(\phi)$ , where

 $\theta = atan2(Im(z), Re(z));$ 

$$r = |z| = \sqrt{x^2 + y^2}$$
 – magnitude

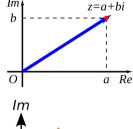

Example:  $z = 8 \cos(24) + i \sin(24)$ )

Exponential form:  $z = re^{i\phi}$ 

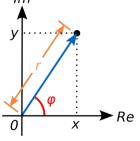

Example:  $z = 6e^{i2.5}$ 

**Euler formula:** transformation from exp. to polar

 $e^{i\phi} = \cos(\phi) + i\sin(\phi)$ 

Rectangular form

Polar or Exponential

form

# **Complex numbers**

Operations

**General Idea**: you should work with *Im* and *Re* part separately (you cannot sum or multiply them)

- Summarization and Substraction  $(x_1 \pm iy_1) + (x_2 \pm iy_2) = (x_1 \pm x_2) + i(y_1 \pm y_2)$
- Multiplication  $(x_1 + iy_1)(x_2 + iy_2) = (x_1x_2 y_1y_2) + i(x_1x_2 + y_1y_2)$

• Division - 
$$\frac{(x_1 + iy_1)}{(x_2 + iy_2)} = \frac{(x_1x_2 + y_1y_2)}{x_2^2 + y_2^2} + i\frac{(y_1y_2 - x_1x_2)}{x_2^2 + y_2^2}$$

# **Complex numbers**

Complex conjugate

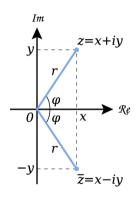

Complex conjugate of complex number  $z = x + iy - \bar{z} = x - iy$ . Geometrically it's reflection of z about Re axis.

#### **Properties:**

$$Re(\bar{z}) = Re(z)$$
) and  $|\bar{z}| = |z|$ ;  
 $Im(\bar{z}) = -Im(z)$  and  $arg \bar{z} \equiv -arg z \pmod{2\pi}$   
 $z\bar{z} = x^2 + y^2 = |z|^2$  - absolute square

### **Operations**

- Summarization and Substraction  $\overline{z \pm w} = \overline{z} \pm \overline{w}$
- Multiplication  $\overline{z \cdot w} = \overline{z} \cdot \overline{w}$
- Division  $\overline{z/w} = \overline{z}/\overline{w}$

Complex Conjugate

$$1 \text{ For } z = \frac{1+i}{\sqrt{2}}:$$

- Compute  $z^2$
- Find r
- Find  $\phi$
- Find z in exponential form
- 2 Find the 8 solutions to the equation  $z^8 = 1$ 
  - Plot those 8 solutions in the complex plane

3 For 
$$z = -1 + i\frac{1}{2}$$

- Find complex conjugate  $(\bar{z})$
- Find z̄z̄
- Find  $z + \bar{z}$
- Plot each result in the complex plane
- 4 Find:
  - $-e^{i\frac{\pi}{2}}$
  - $-e^{i\pi}$
  - i
  - Show each result in the complex plane

1 For 
$$z = \frac{1+i}{\sqrt{2}}$$
:

- Compute  $z^2$ 

- Find *r*
- Find  $\phi$
- Find z in exponential form

### **Answer**

Fix Using matlab

Solution (rus)

- Find the 8 solutions to the equation  $z^8 = 1$ 

Plot those 8 solutions in the complex plane

### **Answer**

Fix Using matlab

3 For 
$$z = -1 + i\frac{1}{2}$$

- Find complex conjugate  $(\bar{z})$
- Find z̄z

- Find  $z + \bar{z}$
- Plot each result in the complex plane

### **Answer**

Fix Using matlab

- 4 Find:
  - $-e^{i\frac{\pi}{2}}$
  - e<sup>iπ</sup>

- i
- Show each result in the complex plane

### **Answer**

Fix Using matlab

Common and Special

### Many concepts have a new name, but old meaning:

• 
$$A^{T} \rightarrow A^{H}$$
;  $A^{H} = \bar{A}^{T}$ ,  $H$  - conjugate  $T$ ;  $Exp$ : 
$$\begin{bmatrix} 1 & -2-i & 5 \\ 1+i & i & 4-2i \end{bmatrix} \rightarrow \begin{bmatrix} 1 & 1-i \\ -2+i & -i \\ 5 & 4+2i \end{bmatrix}$$

•  $Q \rightarrow U$ ; U = Q, where U - Unitary matrix

```
\mathbf{R}^n (n real components)
                                                                                \mathbb{C}^n (n complex components)
length: ||x||^2 = x_1^2 + \cdots + x_n^2
                                                          \leftrightarrow length: ||x||^2 = |x_1|^2 + \cdots + |x_n|^2
transpose: A_{ii}^{\mathrm{T}} = A_{ji}
                                                                            Hermitian transpose: A_{ii}^{H} = \overline{A_{ji}}
(AB)^{\mathrm{T}} = B^{\mathrm{T}}A^{\mathrm{T}}
                                                                                                   (AB)^{H} = B^{H}A^{H}
inner product: x^{T}y = x_1y_1 + \cdots + x_ny_n
                                                                 inner product: x^{H}y = \overline{x}_{1}y_{1} + \cdots + \overline{x}_{n}y_{n}
(Ax)^{\mathrm{T}}v = x^{\mathrm{T}}(A^{\mathrm{T}}v)
                                                                                             (Ax)^{H}y = x^{H}(A^{H}y)
orthogonality: x^{\mathrm{T}}y = 0
                                                                                        orthogonality: x^{H}y = 0
symmetric matrices: A^{T} = A
                                                                                Hermitian matrices: A^{H} = A
A = Q\Lambda Q^{-1} = Q\Lambda Q^{T} (real \Lambda)
                                                                           A = U\Lambda U^{-1} = U\Lambda U^{H} (real \Lambda)
skew-symmetric K^{T} = -K
                                                                                  skew-Hermitian K^{H} = -K
orthogonal O^{T}O = I or O^{T} = O^{-1}
                                                                            unitary U^{\mathrm{H}}U = I or U^{\mathrm{H}} = U^{-1}
(Qx)^{T}(Qy) = x^{T}y \text{ and } ||Qx|| = ||x||
                                                                      (Ux)^{H}(Uy) = x^{H}y \text{ and } ||Ux|| = ||x||
```

$$A = \begin{bmatrix} i & 1 & i \\ 1 & i & i \end{bmatrix}.$$

$$A = \begin{bmatrix} i & 1 & i \\ 1 & i & i \end{bmatrix}.$$

## **Answer**

$$A^{\mathrm{H}}A = \begin{bmatrix} 2 & 0 & 1+i \\ 0 & 2 & 1+i \\ 1-i & 1-i & 2 \end{bmatrix}$$
 and  $AA^{\mathrm{H}} = \begin{bmatrix} 3 & 1 \\ 1 & 3 \end{bmatrix}$  are Hermitian matrices.

Oleg Bulichev AGLA2 6

Solve Az = 0 to find a vector z in the nullspace of A in Problem 2. Show that z is orthogonal to the columns of  $A^{H}$ . Show that z is *not* orthogonal to the columns of  $A^{T}$ . The good row space is no longer  $C(A^{T})$ . Now it is  $C(A^{H})$ .

Solve Az = 0 to find a vector z in the nullspace of A in Problem 2. Show that z is orthogonal to the columns of  $A^{\mathrm{H}}$ . Show that z is *not* orthogonal to the columns of  $A^{\mathrm{T}}$ . The good row space is no longer  $C(A^{\mathrm{T}})$ . Now it is  $C(A^{\mathrm{H}})$ .

### **Answer**

z = multiple of (1+i, 1+i, -2);  $Az = \mathbf{0}$  gives  $z^H A^H = \mathbf{0}^H$  so z (not  $\overline{z}$ !) is orthogonal to all columns of  $A^H$  (using complex inner product  $z^H$  times columns of  $A^H$ ).

If A + iB is Hermitian (A and B are real) show that  $\begin{bmatrix} \mathbf{A} & -\mathbf{B} \\ \mathbf{B} & \mathbf{A} \end{bmatrix}$  is symmetric.

If A + iB is Hermitian (A and B are real) show that  $\begin{bmatrix} \mathbf{A} & -\mathbf{B} \\ \mathbf{A} \end{bmatrix}$  is symmetric.

#### **Answer**

We are given 
$$A + iB = (A + iB)^{H} = A^{T} - iB^{T}$$
. Then  $A = A^{T}$  and  $B = -B^{T}$ . So that  $\begin{bmatrix} A & -B \\ B & A \end{bmatrix}$  is symmetric.
